

Smart LEV Solution & Service Provider

Your all-round **integration service** partner for building a Smart E-Bike / LEV

Connect your bike, Ride the future.

A Platform for building up your Smart LEV with digital ecosystem

Smart LEV Kits

Mid / Hub drive powertrain systems
(Custom option available)

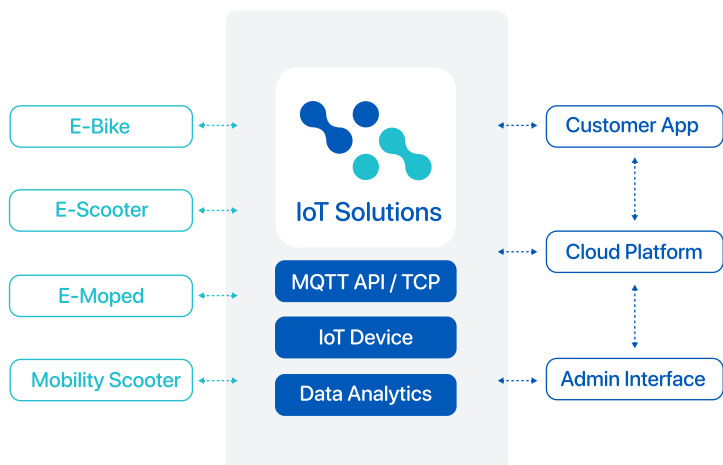

Digital Eco-system & Smart Accessories
(App & Backend & Service Tool)
(IoT Device & Smart Lock for E-Bike)

Specially designed IoT HW & SW platform for LEV for building up your well-integrated connectivity user experience

Product verification and maintenance service

With our professional testing tools to verify the product quality, and increase the efficiency of production and after-service.

Motor Performance Tester

(HIL) Functional Testing Fixture

Service Tool for E-System

Development

Production

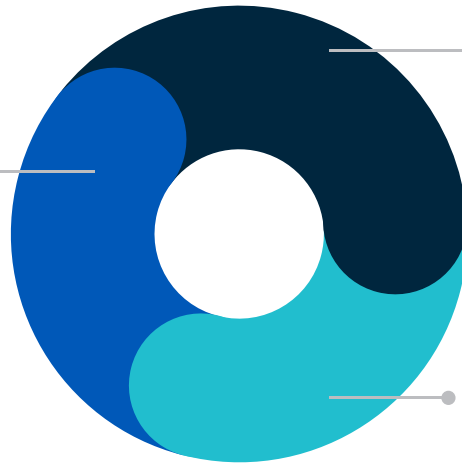

After Sales

Co-Benefit Ecosystem

Brand Owner/manufacturer

Focus on market expansion, model definition, service providing

Create a great branding image in the market

Customers

B2C Consumer/Bike owner/B2B clients:

Experience a good "look, riding, intelligent" product with a good after-sales service

Bikonnnect

Responsible for system integration, providing smart kit and technical after-sales support. Specialist in **LEV** and **ICT** and be able to provide a "one-stop" experience to the customers for their smart LEV in technology application, implementation, and new product development.

Our core services for your LEV. Our core services for your LEV.

We can assist in **250~750W, 36, or 48V** control systems and **the Battery pack with BMS** and regulatory certification.

The service flow to stay with you to build up your own smart E-Bike

Suggest the feasible smart LEV kit according to the requirements of the new model.

- Motor (Hub/Mid drive) and controller
- Battery with BMS
- HMI
- Smart accessories

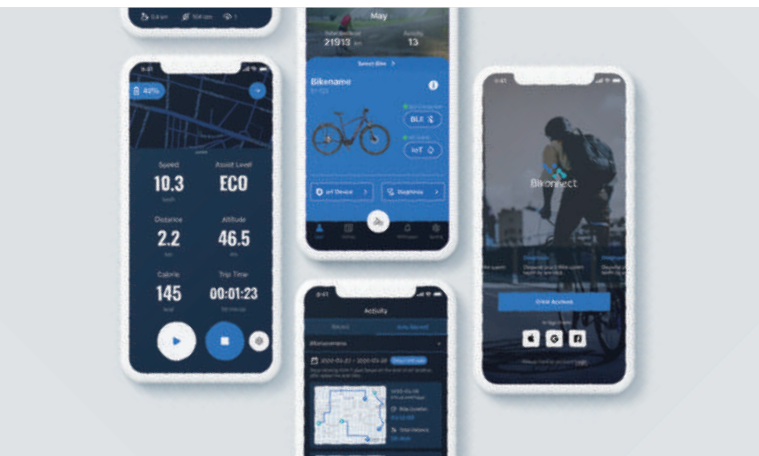

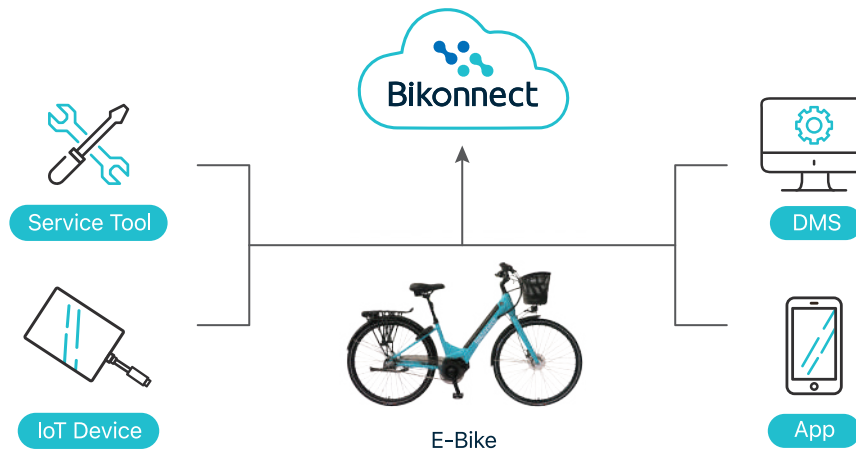

Handle the integration dev. of the LEV and smart devices, the system verification, and getting the regulatory certifications.

Prepare the testing fixtures and tools for production and increase the yield rate.

- Hardware fixtures
- Software testing tool
- Production history record

1st Tier :
Provide the PC Tool to help the brand/dealer to do the system diagnosis and troubleshooting at ease.

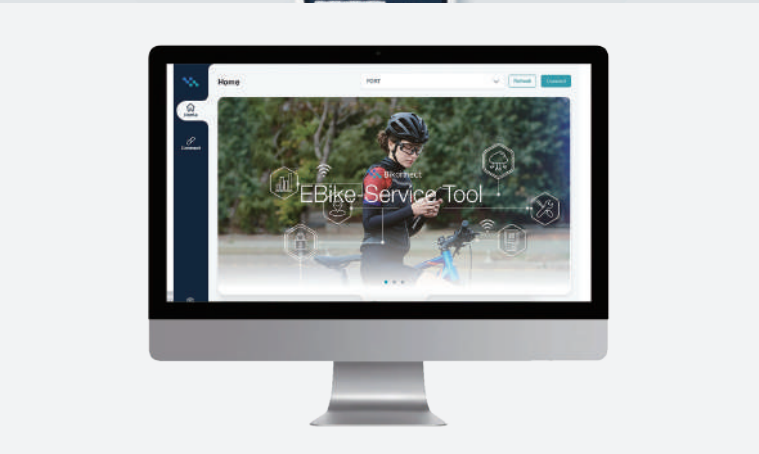

2nd Tier :
Identify the root cause and make improvements for product upgrades and optimization.

E-Bike App

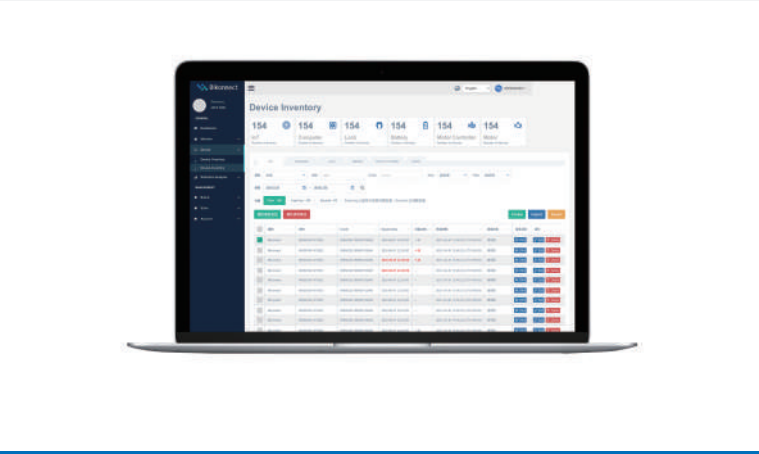

- Synchronize the E-Bike cycling data and save your rides
- Anti-theft, remote tracking and real-time connectivity cloud service with IoT device
- Diagnose the E-Bike system health or update the system SW for improvements
- Automated service notifications
- Integrate with smart lock for locking control via App

**White label version, customization options available*

Service Tool

- E-Bike diagnosis system
- Diagnosis report
- Update device firmware
- Error code and troubleshooting solution
- Service record
- E-Bike profile and history

DMS

- Device status and critical data lookup
- Device version management
- OTA firmware update management
- Device list import and export
- SIM card data traffic usage management (for IoT Device)
- Remote control and vehicle location lookup (for IoT Device)
